The Aging Aircraft Education & Training website is dedicated to cataloguing and providing maintenance tips for existing general aviation aircraft.

WAR Story of the Week

June 29th 2007 - A Boeing Stearman set out on a perfect day for air show practice. Everything seemed to be alright before takeoff. Soon after takeoff, witnesses reported hearing a loud bang, and then saw a large piece of the plane fall to the ground. The engine had separated from the plane. Soon after, the plane dove to the ground and crashed at a 90 degree angle. [Read more](#)

Help launch the site.

- Link to us on your website.
- Submit your own WAR stories or maintenance tips.
- Spread the word.

www.AgingGeneralAviation.org

The Aging General Aviation Education and Training website provides a single, stable access point to type-specific maintenance information. The goal of this site is to provide the general aviation community with the information needed to maintain the safety of older general aviation airplanes. The site includes:

- Recommended curriculum checklists and links for owners and pilots; airframe and powerplant mechanics; avionics technicians; structural Designated Engineering Representatives (DERS) and airframe Aviation Safety Engineers (ASEs); systems and equipment DERs and systems ASEs; and FAA Aviation Safety Inspectors.
- A collection of “WAR stories” collected to provide the aviation community with lessons learned from accident investigations and in-service maintenance findings.
- A list of links relevant to aging general aviation maintenance and repair, as well as a directory of general aviation type clubs and aviation associations.
- A database of FAA Special Airworthiness Information Bulletins, Advisory Circulars, Airworthiness Directives and Aviation Maintenance Alerts.
- And much more to come!

Visitors to the site may use the search engine on the home page to search for documents and links relevant to specific aircraft makes, models, and general maintenance and repair issues.

AgingGeneralAviation.org is hosted, developed and maintained by Wichita State University's National Institute for Aviation Research under the guidance of the Federal Aviation Administration.
